

Mission Cloud Score

Powered by Mission Control

Mission Cloud Score is our **free software solution**, powered by Mission Control, to see how your architecture performs against the well-architected pillars that define best practices for AWS. Learn how your cost efficiency, operations, security, reliability, and performance rank and surface any issues.

Track your score over time as your infrastructure changes, so that you can build with confidence, assured that you've architected with all of the measures AWS defines as a state-of-the-art back-end.

YOUR HEALTH AT A GLANCE

When launching a new initiative, check to see how your score is impacted. Find security concerns or operational gaps in real-time.

PINPOINT PROBLEMS

We list and quantify every issue detracting from your score, so you can see every open concern and understand its level of urgency.

GRAPH YOUR GROWTH

Because we retain your scoring history, you see when your architecture is moving in the right direction and when it needs support.

How It Works

We rely on some of the most accurate and widely trusted tools for measuring your environmental health on AWS. Your Mission Cloud Score is calculated using AWS Trusted Advisor, AWS Security Hub, and AWS Compute Optimizer checks along with our own proprietary scoring algorithm.

SEE WHICH RESOURCES ARE IMPACTED

When something impairs your score, see the exact resources that triggered the missed check and even download this list to use with other tooling.

A FEED OF YOUR MOST RECENT CHANGES

Every time a check's status changes, you'll get a notification in our activity feed, so you can see exactly what caused the change.

How to Get Started

Mission Cloud Score is free in the AWS Marketplace. To get started, you'll need:

-  Business Support or higher
-  At least one AWS account to connect (free for up to 10 accounts)

Claim Your 30-minute FREE Optimization Review

As part of Mission Cloud Score, we offer every customer a FREE optimization review with one of our Cloud Analysts to discuss your results. Contextualize what your score means, go over any open concerns you have, and discuss optimization strategy for your environment.

Mission Cloud is a next-generation cloud services provider, combining managed and professional services. We help businesses migrate, manage, modernize and optimize their AWS environments at every stage of their cloud journey.
